Drowning prevention

Crèches plus survival-swim training are proven, cheap, evidence-backed child-drowning prevention

✓ PROVEN PRECEDENT

SoLiD: crèches cut drowning 88%;
Bloomberg \$104M behind it

▲ WHY IT MATTERS

Drowning the #1 killer of 1–4s · ~40
children/day

THE SITUATION IN BANGLADESH

In Bangladesh drowning is the leading cause of death among children aged 1–4 years, killing roughly 40 children every day ¹. The country has one of the world's highest drowning rates, with most deaths during the unsupervised mid-morning hours when caregivers are working ⁷. This burden is part of a global crisis: WHO estimates ~300,000 drowning deaths worldwide each year, a quarter of them children under 5, with 92% concentrated in low- and middle-income countries like Bangladesh ⁵. Yet most of these deaths go unrecorded and unaddressed, even though local, low-cost prevention measures already exist ¹.

OUR PITCH

Kinara closes the supervision gap with two evidence-backed interventions: community crèches (Anchal) that keep 1–4 year-olds safe during peak-risk daytime hours, and SwimSafe survival-swim training for older children. The crèche model is proven — in the large-scale SoLiD cohort study, drowning deaths fell by 88% among enrolled children aged 1–4 ⁶, RNLI/CIPRB report a free crèche place cuts a child's drowning risk by 82% ⁷, and SwimSafe was evaluated as 96% protective against drowning ³. It is also remarkably cheap, at roughly US\$16 per child per year and an ICER of about US\$17,008 per life saved ², and is exactly the package WHO's 2021 guideline recommends — day-care plus basic swimming and water-safety skills ⁴. Kinara is impact-first and funder-funded by design, riding a proven wave of catalytic capital — Bloomberg Philanthropies committed an additional US\$60 million in 2024 (US\$104 million total globally) for drowning prevention including Bangladesh ⁸ — so results-based grants, not user fees, pay for saving children's lives.

Built so the operator never fails

HelperChain doesn't hand out a loan and walk away. Every operator gets the **full rail** — inputs, training, finance, supervision and a **guaranteed buy-back** of what they produce. We carry the risk so an ordinary person can succeed.

Equipped & trained

We provide the tools, inputs and hands-on training to start — turning **toddler** into a working operation. No prior capital or expertise required.

Funded, not indebted

Pay-as-you-go, **riba-free** finance turns a poor person into a **funded** operator — with **no debt if a cycle fails**. The network carries the downside, not the operator.

Supervised & supported

Ongoing follow-up and quality assurance — the single factor peer-reviewed evidence shows decides whether ventures survive (**p<0.001**). The operator is never left alone.

Guaranteed buy-back

HelperChain **commits to purchase the output at a fair, pre-agreed price**, so there is always a market — the operator just produces; **we guarantee the offtake**. This is what removes the fear of failure.

Surplus recycles

A thin margin is recycled to fund the next operator — so help compounds and the network grows stronger with every person it lifts.

The promise: we give the operator everything needed to succeed — and we buy back the output at a fair, pre-agreed price. Inputs in, output bought back, risk carried by the network — so they never fail alone.
